

2Fuel Technologies Announces Acquisition

New Braunfels TX. – July 26, 2017 – 2Fuel Technologies Inc. (“2Fuel”) today announced it has purchased all the intellectual property, and supporting assets from California Clean Air Technologies (“CCAT”), which includes an LPG CARB certification for Off-Road Mobile and Stationary engines, covering all Diesel Manufacturers engines under 650 HP.

“This acquisition was a natural evolution for our company”, said 2Fuel’s COO Mike Laplante. “Our previous focus was converting Over-the-Road Class 8 & 7 trucks to utilize our patented Dual Fuel System to blend CNG/LNG or LPG with diesel fuel, while CCAT’s focus was the Off-Road LPG market opportunities supported by our 2Fuel Dual Fuel System technology. Moving forward, 2Fuel’s will market our Dual Fuel Systems, to all applications in the On-Road and Off-Road markets, which will support many synergies for our Customers, and continue to drive product costs down.”

About 2Fuel Technologies Inc.

2Fuel CARB & EPA approved systems offer a superior advantage in the Dual Fuel market as the only dual fuel system that continues to blend fuels, under full load, and throughout the complete torque curve, while maintaining the OEM engine horsepower and torque specification. As a result, 2Fuel products deliver the highest possible End of Day Average Dilution Percentage on any diesel engine, in the industry today, using CNG, LNG or LPG.”

2Fuel Technologies’ management and products have over 35 years of experience in alternative fuels applications, for the Over-the-Road Truck and Bus market, Mobile or Stationary Industrial Engines and Prime Power Generation in the oil & gas industry. 2Fuel Technologies is headquartered in New Braunfels, TX, with offices in Sheridan WY, and London, Ontario.

2Fuel’s patented products have been installed on thousands of engines throughout the world and remains the only dual fuel technology to achieve a Tier 1 supplier contract for Dual Fuel Systems, an EPA OEM Certificate for Over the Road 15L natural gas, and CARB approvals covering all diesel engine makes and models under 650 HP operating in off road mobile and stationary applications using LPG as the blending fuel.
